## WORK EXPERIENCE

### Junior Software Developer Enhanced Software Solutions

04/2022 - Present

Mumbai, India

#### Achievements/Tasks

- Worked on the development of a Timesheet Application. We use the Spring Boot framework for the backend and Angular for the front end. The Timesheet Application served as a portal for users to efficiently track and manage their working hours, projects, and tasks. By leveraging these technologies, you were able to create a seamless and user-friendly experience for time tracking and reporting.
- During your work, I contributed to various projects and applications. In the employee portal JSP-based application, I specifically focused on creating the leave application module and reports page. This involved designing and implementing functionality that allows employees to submit leave requests and view relevant reports.
- An ERP (Enterprise Resource Planning) application. work experience in working on a comprehensive system that integrates various business functions such as finance, and HR. Overall, my contributions encompass creating modules, reports, and portals for different applications, demonstrating your proficiency in web development, backend frameworks like Spring Boot, and frontend frameworks Angular.

## EDUCATION

### Bachelor of Computer Application in Information Technology

sahyog college of management studies

2019 - 2022

7.8 CGPA

#### Project

- The Grocery Software consists of a Splash Screen, Login Frame, Employee table, Manager table, Product table, and Order history table. It also has a Product frame to buy products.
- The Manager frame has four layouts: Add Product frame, Viewpoint to get the status of stock, Order history frame, and Employee frame to add and remove employees. The software is built in NetBeans using the Swing framework and Java.

## PERSONAL PROJECTS

### Weather APP - Android Application (2022)

- The Weather app in Android Studio includes a Splash screen, a Main layout with a search bar for city search, a Navigation drawer with options for About Us and Home, and a profile photo.
- The Main content of the app displays today's weather forecast and the week's forecast.
- The second layout of the app is dedicated to news, categorized into sections like Business, Tech, Politics, and more. The app uses weather and news APIs, utilizes Volley for JSON parsing, and Picasso for image loading.
